24: Wrangell--289 G-3 (1820-23) 1842 Yakut
116, 151, 153

"They are also remarkable for the acuteness of their sight. A middle-aged Jakut assured M. Anjou that he had several times seen that blue star, pointing to Jupiter, swallow up another very small star, and soon afterward vomit it forth again: thus he had observed with the naked eye the immersion and emersion of one of Jupiter's satellites. Their memory and local sagacity are also very surprising, and are of the greatest use to them in their journeys through these extensive and unvaried wastes. A pool, a stone, a bush, a rise of ground so slight as to be hardly perceptible, objects which a European scarcely notices, are deeply impressed in their memory, and serve years afterward to guide them over the desert and trackless steppe."
